

S.E.P.T Major Project (Milestone 2) Sprint Planning Notes

Team: P04-09

Sprint: 2

Date: 21/09/2025

Attended:

- Scrum Master: Okasha Varoo
- Product Owner: Dale Stanbrough
- Development team: Jannik Ernst, Benjamin Hatfield, Abdulahi Abdulahi, Azman Asfi, Nghi Le Hoang Vinh

1. Goal

The aim of Sprint 2 is to expand the functionality of the platform by focusing on administrative controls, event management enhancements, and user profile management. Building on the foundation from Sprint 1, this sprint ensures that admins have full oversight and control, event capacities are properly managed, and users can update their personal information. By completing these stories, the product will have stronger administrative and user-facing capabilities, preparing for more complex features in future sprints.

2. Duration of the sprint

3 weeks

3. Team's vision for this sprint

- **Admin assigns roles to users:** The system will allow admins to change roles of existing users dynamically, ensuring correct permissions are applied immediately. This enhances flexibility for managing the platform.
- **Admins can ban user accounts:** Admins will be able to disable problematic accounts, preventing access and interaction with events. This will improve security and moderation capabilities.
- **Events have capacity management:** Events will now track attendee numbers and enforce limits, preventing overbooking and ensuring reliable RSVPs.
- **Profile information management:** Users can view and update their profile information, such as name, email, and preferences. This ensures the platform remains personalized and user-friendly.

- **Admins can view any event details:** Admins will have a full view of all events, including attendee lists and feedback, to oversee platform activity and assist with support.
- **Admins can edit any event:** Admins will be able to make changes to event details, ensuring accurate and up-to-date information is maintained on the platform.

By the end of Sprint 2, the product should have robust administrative control, proper event management, and improved user profile capabilities, forming a more complete and polished system.

4. Estimation in story points

- **Admin assigns roles to users:** 3 points – Implementation is straightforward but requires careful permission logic.
- **Admins can ban user accounts:** 3 points – Simple to implement, mainly involves backend logic and UI updates.
- **Events capacity management:** 5 points – Requires tracking RSVPs and enforcing limits; moderate complexity due to real-time checks.
- **Profile information management:** 3 points – Straightforward CRUD operations with validation.
- **Admins can view any event details:** 4 points – Medium complexity due to admin view and potential filtering of sensitive data.
- **Admins can edit any event:** 5 points – Requires secure editing capabilities with validation and update propagation.
